Helping Flour Mills Avoid Expensive Machine & Spare Failures | 21+
Years in Milling Operations | Trusted by Mills Across 16 Countries |
Brindavan Udyog India
Greater Delhi Area

Summary

In the flour milling industry, operational success is not dependent on machines alone. It depends on the right ecosystem — technical decisions, reliable machinery, correct spare selection, skilled manpower, operational understanding, machine compatibility, preventive maintenance, and long-term performance-focused thinking. For more than 21 years, I have been actively associated with multiple verticals connected to the flour milling and grain processing industry, working closely with mill owners, technical teams, OEMs, traders, and industry professionals across India and international markets. As a second-generation entrepreneur, I am associated with:

- "Brindavan Udyog (India)" (<https://www.brindavanudyog.com>) — Industrial spares, flour mill accessories, machine performance support, and operational reliability solutions.
- "DPG Milling World" (<https://www.themilling.m.com>) — A leading knowledge-sharing and media platform focused on flour milling, grain processing, industry awareness, and technical insights.
- "The Used Machine" (<https://www.theusedmachine.com>) — A platform connecting buyers and sellers of used flour milling and industrial machinery.
- "Milling Jobs" (<https://www.millingjobs.com>) — A platform supporting recruitment and talent connections within the milling industry.

Over the years, I have interacted with businesses across 16 countries and contributed toward solving practical operational and machine-related challenges faced by the milling industry. I strongly believe that the wrong industrial decision rarely appears expensive initially. Its real cost emerges later through downtime, machine wear, inconsistent production, operational instability, maintenance issues, and avoidable losses. My areas of interest and industry involvement include:

- Flour mill operations
- Grain processing systems
- Industrial spares
- Machine optimization
- Preventive maintenance
- Used machinery ecosystem
- Industry networking
- Technical education
- Milling recruitment and talent development
- Operational problem-

solvingI also actively share insights related to:• Hidden operational losses in flour mills• Downtime reduction strategies• Industrial buying mistakes• Spare selection intelligence• Machine-life optimization• Real-world factory observations• Maintenance and operational efficiencyAlways open to meaningful discussions with flour mill owners, technical professionals, OEMs, machinery suppliers, consultants, and individuals associated with the global milling industry.

Experience

Brindavan Udyog - India
Head Of Marketing
2004 - Present (22 years)

Education

Amity Business School
Bachelor of Business Administration (BBA), Marketing · (2001 - 2004)

Green Fields School
Commerce · (1987 - 2001)
